Subject Index

Adsorption
Effect of support material on the adsorption structures of furan and maleic anhydride on the surface of V_2O_5/P_2O_5 catalysts. II. Results of in situ infrared spectroscopic studies 9
Adsorption
Catalytic hydrodealkylation of tar acids 39
Adsorption
Characterization of copper/alumina catalysts prepared by deposition-precipitation using urea hydrolysis. I. Nitrous oxide decomposition and reaction of ethanol 103
Ageing
Effects of sintering on the active site distribution on promoted catalysts 115
Ageing
Effect of catalyst composition on the hydrodesulphurization and hydrodemetallization of atmospheric residual oil 221
Ammonia pretreatment
Effect of preliminary treatment with ammonia on the reduction of CuY zeolite 27
Aromatization
Conversion of propene into gasoline and middle distillate using alkalised ZSM-5 zeolite catalysts L1
Aromatization
Structural recognition and preorganization in zeolite catalysis: Direct aromatization of n-hexane on zeolite L-based catalysts L15
Atmospheric residual oil
Effect of catalyst composition on the hydrodesulphurization and hydrometallization of atmospheric residual oil 221

Catalyst characterization (AAS)
selective dehydrogenation of cyclohexanol to cyclohexanone on $Cu-ZnO-Al_2O_3$ catalysts L11
Catalyst characterization (nitrogen adsorption)
Effect of support material on the catalytic performance of V_2O_5/P_2O_5 catalysts for the selective oxidation of but-1-ene and furan to maleic anhydride and its consecutive nonselective oxidation. I. Results of catalytic testing 1
Catalyst characterization (pore structure)
Physical and catalytic properties of smectite clays pillared by alumina in disproportionation of 1,2,4-trimethylbenzene 171
Catalyst characterization (spectroscopic techniques)
Double promotion of palladium/silica catalysts by iron and magnesium oxide in synthesis of methanol from carbon monoxide and hydrogen 71
Catalyst characterization (spectroscopic techniques)
Studies on the promotion of nickel-alumina coprecipitated catalysts. I. Titanium oxide 239
Catalyst characterization (spectroscopic techniques)
Studies on the promotion of nickel-alumina coprecipitated catalysts. II. Lanthanum oxide 257
Catalyst characterization (spectroscopic techniques)
Studies on the promotion of nickel-alumina coprecipitated catalysts. III. Cerium oxide 281
Catalyst characterization (spectroscopic techniques)
Vanadium interactions with treated silica aluminas 291
Catalyst characterization (spectroscopic techniques)
Coke formation through the reaction of ethene over hydrogen mordenite. II. IR and ^{13}C-NMR studies 345
Catalyst characterization (temperature-programmed techniques)
Effect of preliminary treatment with ammonia on the reduction of CuY zeolite 27
Catalyst characterization (temperature-programmed techniques)
Platinum-tin/alumina catalyst. Modification of the metallic phase after successive oxidation-reduction cycles 61
Catalyst characterization (temperature-programmed techniques)
Sulphide catalysts on silica as a support. VIII. Peculiarities of thiophene hydrogenolysis and probable nature of "synergetic effect" 191

Catalyst characterization (temperature-programmed techniques)
Characterization of supported copper catalysts for methanol dehydrogenation prepared from silica hydrogel 335
Catalyst characterization (XRD, AAS)
Characterization of copper/alumina catalysts prepared by deposition-precipitation using urea hydrolysis. I. Nitrous oxide decomposition and reaction of ethanol 103
Catalyst characterization (XRD, IR, TPR)
Oxidative dimerization of methane on lead oxide-alumina catalysts 209
Catalyst preparation (deposition-precipitation)
Selective dehydrogenation of cyclohexanol to cyclohexanone on Cu-ZnO-Al_2O_3 Catalysts L11
Catalyst preparation (deposition-precipitation)
Characterization of copper/alumina catalysts prepared by deposition-precipitation using urea hydrolysis. I. Nitrous oxide decomposition and reaction of ethanol 103
Catalyst preparation (dry impregnation)
Effect of support material on the catalytic performance of V_2O_5/P_2O_5 catalysts for the selective oxidation of but-1-ene and furan to maleic anhydride and its consecutive nonselective oxidation. I. Results of catalytic testing 1
Catalyst preparation (evaporation)
Catalytic hydrodealkylation of tar acids 39
Catalyst preparation (ion exchange)
Preparation of PtHY catalysts. Influence on the catalytic properties of the complexes used as platinum precursors 325
Catalyst preparation (precipitation)
Studies on the promotion of nickel-alumina coprecipitated catalysts. I. Titanium oxide 239
Catalyst preparation (precipitation)
Studies on the promotion of nickel-alumina coprecipitated catalysts. II. Lanthanum oxide 257
Catalyst preparation (precipitation)
Studies on the promotion of nickel-alumina coprecipitated catalysts. III. Cerium oxide 281
Catalyst preparation (wet impregnation)
Copper catalysts for the steam reforming of methanol. Analysis of the preparation variables 53
Catalyst preparation (wet impregnation)
Platinum-tin/alumina catalyst: Modification of the metallic phase after successive oxidation-reduction cycles 61
Catalyst preparation (wet impregnation)
Effect of catalyst composition on the hydrodesulphurization and hydrodemetallization of atmospheric residual oil 221
Cerium oxide
Studies on the promotion of nickel-alumina coprecipitated catalysts. III. Cerium oxide 281
Cobalt-molybdenum sulphide/carbon
Non-existence of synergism in the hydrodenitrogenation of pyridine over carbon-supported cobalt-molybdenum sulphide catalysts L23
Cobalt-molybdenum/alumina
Effect of catalyst composition on the hydrodesylphurization and hydrodemetallization of atmospheric residual oil 221
Coke formation
Effect of catalyst composition on the hydrodesulphurization and hydrodemetallization of atmospheric residual oil 221
Coke formation
Vanadium interactions with treated silica aluminas 291
Coke formation
Role of zeolite non-framework aluminium in catalytic cracking 307
Coke formation
Coke formation through the reaction of ethene over hydrogen mordenite. II. IR and ^{13}C-NMR studies 345
Copper
Copper catalysts for the steam reforming of methanol. Analysis of the preparation variables 53
Copper-zinc oxide/alumina
Selective dehydrogenation of cyclohexanol to cyclohexanone on Cu-Zn-Al_2O_3 catalysts L11
Copper-zinc oxide/silica
Support and additive effects in the synthesis of methanol over copper catalysts 131
Copper/alumina
Characterization of copper/alumina catalysts prepared by deposition-precipitation using urea hydrolysis. I. Nitrous oxide de-

composition and reaction of ethanol 103
Copper/silica
Characterization of supported copper catalysts for methanol dehydrogenation prepared from silica hydrogel 335
Cracking catalysts
Vanadium interaction with treated silica aluminas 291
Cracking catalysts
Role of zeolite non-framework aluminium in catalytic cracking 307
CuY zeolite
Effect of preliminary treatment with ammonia on the reduction of CuY zeolite 27
Cyclohexane dehydrogenation
Platinum–tin/alumina catalyst: Modification of the metallic phase after successive oxidation–reduction cycles 61
Cyclohexanol dehydrogenation
Selective dehydrogenation of cyclohexanol to cyclohexanone on Cu–ZnO–Al_2O_3 catalysts L11
Cyclohexanone
Selective dehydrogenation of cyclohexanol to cyclohexanone on Cu–ZnO–Al_2O_3 catalysts L11
Cyclopentane hydrogenolysis
Platinum–tin/alumina catalyst: Modifcation of the metallic phase after successive oxidation–reduction cycles 61

Disproportionation
Isomerization and disproportionation of *m*-xylene. Selectivities induced by the void structure of the zeolite framework 85

Enzyme catalysis
Structural recognition and preorganization in zeolite catalysis; Direct aromatization of n-hexane on zeolite L-based catalysts L15
Ethanol conversion
Characterization of copper/alumina catalysts prepared by deposition–precipitation using urea hydrolysis. I. Nitrous oxide decomposition and reaction of ethanol 103

Furan oxidation
Effect of support material on the catalytic performance of V_2O_5/P_2O_5 catalysts for the selective oxidation of but-1-ene and furan to maleic anhydride and its consecutive nonselective oxidation. I. Results of catalytic testing 1

Gasoline
Conversion of propene into gasoline and middle distillate using alkalised ZSM-5 zeolite catalysts L1

Heptane conversion
Preparation of PtHY catalysts. Influence on the catalytic properties of the complexes used as platinum precursors 325
Hexane aromatization
Structural recognition and preorganization in zeolite catalysis: Direct aromatization of n-hexane on zeolite L-based catalysts L15
Hydrodealkylation
Catalytic hydrodealkylation of tar acids 39
Hydrodemetallization
Effect of catalyst composition on the hydrodesulphurization and hydrodemetallization of atmospheric residual oil 221
Hydrodenitrogenation
Non-existence of synergism in the hydrodenitrogenation of pyridine over carbon-supported cobalt–molybdenum sulphide catalysts L23
Hydrodesulphurization
Effect of catalyst composition on the hydrodesulphurization and hydrodemetallization of atmospheric residual oil 221
Hydrogen mordenite
Coke formation through the reaction of ethene over hydrogen mordenite. II. IR and ^{13}C-NMR studies 345
Hydrogenolysis
Sulphide catalysts on silica as a support. VII. Isotope exchange of hydrogen sulphide with sulphided catalysts 183

In-situ infrared spectroscopy
Effect of support material on the adsorption structures of furan and maleic anhydride on the surface of V_2O_5/P_2O_5 catalysts. II. Results of in-situ infrared spectroscopic studies 9
Isomerization
Isomerization and disproportionation of *m*-xylene. Selectivities induced by the void structure of the zeolite framework 85
Isotope exchange

Sulphide catalysts on silica as a support. VII. Isotope exchange of hydrogen sulphide with sulphide catalysts 183

Kinetics
Effects of sintering on the active site distribution on promoted catalysts 115
Kinetics
Sulphide catalysts on silica as a support. VIII. Peculiarities of thiophene hydrogenolysis and probable nature of "synergetic effect" 191

Lanthanum oxide
Studies on the promotion of nickel-alumina coprecipitated catalysts. II. Lanthanum oxide 257
Lead oxide-alumina
Oxidative dimerization of methane on lead oxide-alumina catalysts 209

Maleic anhydride
Effect of support material on the catalytic performance of V_2O_5/P_2O_5 catalysts for the selective oxidation of but-1-ene and furan to maleic anhydride and its consecutive nonselective oxidation. I. Results of catalytic testing. 1
Maleic anhydride
Effect of support material on the adsorption structures of furan and maleic anhydride on the surface of V_2O_5/P_2O_5 catalysts. II. Results of in-situ infrared spectroscopic studies 9
Methane dimerization
Oxidative dimerization of methane on lead oxide-alumina catalysts 209
Methanol dehydrogenation
Characterization of supported copper catalysts for methanol dehydrogenation prepared from silica hydrogel 335
Methanol reforming
Copper catalysts for the steam reforming of methanol. Analysis of the preparation variables 53
Methanol synthesis
Double promotion of palladium/silica catalysts by iron and magnesium oxide in synthesis of methanol from carbon monoxide and hydrogen 71
Methanol synthesis
Support and additive effects in the synthesis of methanol over copper catalysts 131
Molybdenum/silica
Sulphide catalysts on silica as a support. VII. Isotope exchange of hydrogen sulphide with sulphide catalysts 183
Mössbauer spectroscopy
Double promotion of palladium/silica catalysts by iron and magnesium oxide in synthesis of methanol from carbon monoxide and hydrogen 71

Nickel-alumina
Studies on the promotion of nickel-alumina coprecipitated catalysts. I. Titanium oxide 239
Nickel-alumina
Studies on the promotion of nickel-alumina coprecipitated catalysts. II. Lanthanum oxide 257
Nickel-alumina
Studies on the promotion of nickel-alumina coprecipitated catalysts. III. Cerium oxide 281
Nickel-molybdenum-silica
Sulphide catalysts on silica as a support. VII. Isotope exchange of hydrogen sulphide with sulphide catalysts 183
Nitrous oxide decomposition
Characterization of copper/alumina catalysts prepared by deposition-precipitation using urea hydrolysis. I. Nitrous oxide decomposition and reaction of ethanol 103

Oligomerization
Conversion of propene into gasoline and middle distillate using alkalised ZSM-5 zeolite catalysts L1

Palladium/silica
Double promotion of palladium/silica catalysts by iron and magnesium oxide in synthesis of methanol from carbon monoxide and hydrogen 71
Pillared clays
Physical and catalytic properties of smectite clays pillared by alumina in disproportionation of 1,2,4-trimethylbenzene 171
Platinum-tin/alumina
Platinum-tin/alumina catalyst: Modification of the metallic phase after successive oxidation-reduction cycles 61
Platinum/zeolite

Preparation of PtHY catalysts. Influence on the catalytic properties of the complexes used as platinum precursors 325
Propene conversion
Conversion of propene into gasoline and middle distillate using alkalised ZSM-5 zeolite catalysts L1
Pyridine
Non-existence of synergism in the hydrodenitrogenation of pyridine over carbon-supported cobalt–molybdenum sulphide catalysts L23

Regeneration
Platinum–tin/alumina catalyst: Modification of the metallic phase after successive oxidation–reduction cycles 61

Selectivity (benzene)
Structural recognition and preorganization in zeolite catalysis: Direct aromatization of n-hexane on zeolite L-based catalysts L15
Selectivity (cyclohexanone)
Selective dehydrogenation of cyclohexanol to cyclohexanone on Cu-ZnO-Al_2O_3 Catalysts L11
Selectivity (gasoline)
Conversion of propene into gasoline and middle distillate using alkalised ZSM-5 zeolite catalysts L1
Selectivity (gasoline)
Role of zeolite non-framework aluminium in catalytic cracking 307
Selectivity (maleic anhydride)
Effect of support material on the catalytic performance of V_2O_5/P_2O_5 catalysts for the selective oxidation of but-1-ene and furan to maleic anhydride and its consecutive nonselective oxidation. I. Results of catalytic testing 1
Selectivity (methanol)
Double promotion of palladium/silica catalysts by iron and magnesium oxide in synthesis of methanol from carbon monoxide and hydrogen 71
Selectivity (other)
Effects of sintering on the active site distribution on promoted catalysts 115
Selectivity (phenol and cresols)
Catalytic hydrodealkylation of tar acids 39
Selectivity (tetramethylbenzene)
Physical and catalytic properties of smectite clays pillared by alumina in disproportionation of 1,2,4-trimethylbenzene 171
Silica hydrogel
Characterization of supported copper catalysts for methanol dehydrogenation prepared from silica hydrogel 335
Sintering
Effects of sintering on the active site distribution on promoted catalysts 115
Smectite clays
Physical and catalytic properties of smectite clays pillared by alumina in disproportionation of 1,2,4-trimethylbenzene 171
Steam reforming
Copper catalysts for the steam reforming of methanol. Analysis of the preparation variables 53
Strong metal–support interaction
Studies on the promotion of nickel–alumina coprecipitated catalysts. I. Titanium oxide 239
Structural recognition
Structural recognition and preorganization in zeolite catalysis: Direct aromatization of n-hexane on zeolite L-based catalysts L15
Sulphide catalysts
Sulphide catalysts on silica as a support. VII. Isotope exchange of hydrogen sulphide with sulphide catalysts 183
Sulphide catalysts
Sulphide catalysts on silica as a support. VIII. Peculiarities of thiophene hydrogenolysis and probable nature of "synergetic effect" 191
Synergetic effect
Sulphide catalysts on silica as a support. VIII. Peculiarities of thiophene hydrogenolysis and probable nature of "synergetic effect" 191
Synergism
Non-existence of synergism in the hydrodenitrogenation of pyridine over carbon supported cobalt–molybdenum sulphide catalysts L23
Syngas conversion
Double promotion of palladium/silica catalysts by iron and magnesium oxide in synthesis of methanol from carbon monoxide and hydrogen 71
Syngas conversion

Support and additive effects in the synthesis of methanol over copper catalysts 131

Tar acids
Catalytic hydrodealkylation of tar acids 39

Thiophene hydrogenolysis
Sulphide catalysts on silica as a support. VIII. Peculiarities of thiophene hydrogenolysis and probable nature of "synergetic effect" 191

Titanium oxide
Studies on the promotion of nickel–alumina coprecipitated catalysts. I. Titanium oxide 239

Trimethylbenzene disproportionation
Physical and catalytic properties of smectite clays pillared by alumina in disproportionation of 1,2,4-trimethylbenzene 171

Vanadium/phosphorus oxide
Effect of support material on the catalytic performance of V_2O_5/P_2O_5 catalysts for the selective oxidation of but-1-ene and furan to maleic anhydride and its consecutive nonselective oxidation I. Results of catalytic testing 1

Vanadium/phosphorus oxide
Effect of support material on the adsorption structures of furan and maleic anhydride on the surface of V_2O_5/P_2O_5 catalysts. II. Results on in-situ infrared spectroscopic studies 9

Vanadium/silica–alumina
Vanadium interaction with treated silica aluminas 291

Void structure
Isomerization and disproportionation of *m*-xylene. Selectivities induced by the void structure of the zeolite framework 85

Xylene disproportionation
Isomerization and disproportionation of *m*-xylene. Selectivities induced by the void structure of the zeolite framework 85

Zeolites
Conversion of propene into gasoline and middle distillate using alkalised ZSM-5 zeolite catalysts L1

Zeolites
Structural recognition and preorganization in zeolite catalysis. direct aromatization of n-hexane on zeolite L-based catalysts L15

Zeolites
Effect of preliminary treatment with ammonia on the reduction of CuY zeolite 27

Zeolites
Isomerization and disproportionation of *m*-xylene. Selectivities induced by the void structure of the zeolite framework 85

Zeolites
Role of zeolite non-framework aluminium in catalytic cracking 307

Zeolites
Preparation of PtHY catalysts. Influence on the catalytic properties of the complexes used as platinum precursors 325

ZSM-5
Conversion of propene into gasoline and middle distillate using alkalised ZSM-5 zeolite catalysts L1
